SyTech Partners with HMS Networks
Reports and Dashboards for Industrial Internet of Things (IIoT)

Franklin, MA: SyTech Inc., the leading provider of automated report generation and data analysis software, today announced a partnership with HMS Networks to provide reports and dashboards seamlessly from data and alarms logged in remote locations by the Ewon Flexy device.

A frontrunner in connecting devices and machines to industrial networks for over 30 years, HMS Networks is the leading independent supplier of solutions for industrial communication and IIoT with products offered under the Anybus®, IXXAT® and eWON® brands. In particular, The Ewon Flexy is a data collection gateway between LAN, WAN and serial sides. The device pushes remote data and alarms through a VPN tunnel to the Talk2M service called "DataMailbox".

With XLReporter's intuitive point-and-click configuration, users use the DataMailbox to create informative drill-down, summary, utilization and regulatory reports. Completed reports are distributed via web pages, networked printers, PDF files and email.

"Both HMS Networks and SyTech have proven track records in industry, with over 50 years of combined experience. The customers of both companies will benefit from this relationship, making it significantly easier for them to acquire their data and produce reports quickly and easily." says Peter Kaprielian, CTO of SyTech. "The partnership of HMS Networks and SyTech is a solid endorsement of the value XLReporter brings to applications that require reports and dashboards."
