

Product Registration

Obtain a License

There are two ways to register the product. If a hardware key was purchased with the license, it can be plugged into the machine where the product is installed, and the product is then fully registered.

If a hardware key was not purchased or if an evaluation is being performed, from the **Project Explorer**, select the **Home** tab, **Register Product**.

Evaluation License

Enter the information required and select **Start Trial** to start the evaluation. When the evaluation period expires, you can re-open this display and select **Extend Trial**.

The evaluation license runs continuously for two hours and limits the number of data connections to a report template. When the product is registered, this limit is removed.

Full License

Select **Enter Key** to obtain the lock code. Contact SyTech and provide the lock code and product serial number to obtain a key code.

Move a License

For a software key, to move the registration to another PC, select **Options, Move Registration** to obtain a transfer code. Contact SyTech and provide this transfer code along with lock code from the new installation.

License Upgrade

If you are upgrading XLReporter to a new major version (e.g., from version 14 to version 15), your license must be upgraded as well.

Soft Key

After installing the new version on the same machine as the previous version, select **Register Product** from the **Home** tab. Select **Enter Key** to obtain the lock code. Contact SyTech and provide the lock code and product serial number to obtain a key code.

If you are installing on a different machine than the original, you must first follow the *Move A License* process above before registering.

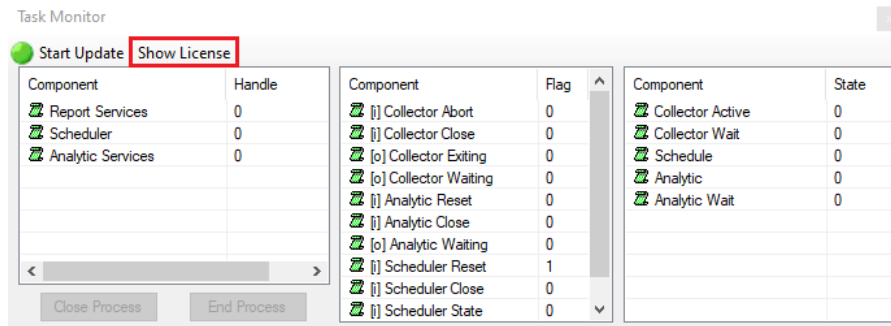

Hard Key

To upgrade your hard key dongle, do the following:

- Contact SyTech and provide the serial number of your license and an email will be sent containing a license file.
- Save the file on the machine where **XLReporter** is installed.
- Make sure the hardware key is connected
- Start the **Project Explorer** using an **Administrator** account
- Under **Tools**, in the **Diagnostic** section, open **Task Monitor**.

- In the **Task Monitor**, select **Show License**.

- At the bottom of the **License** display, click **Update Hard Key**.

- For Key File, use the browse pushbutton [...] to select the license file.

- Click **Update** to update the hard key.
